CSC 322

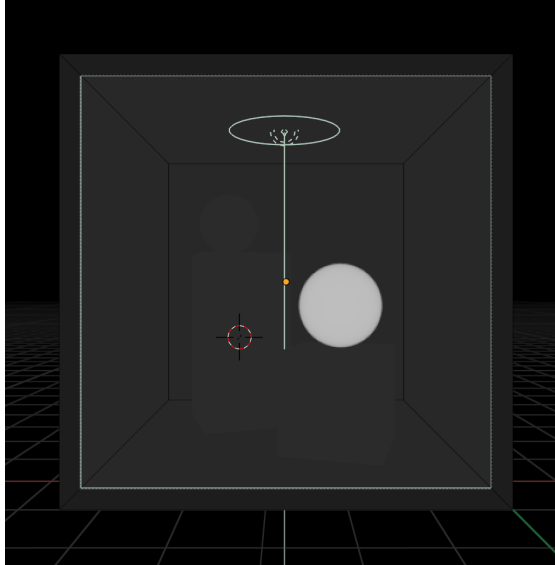

Activity 4

1.

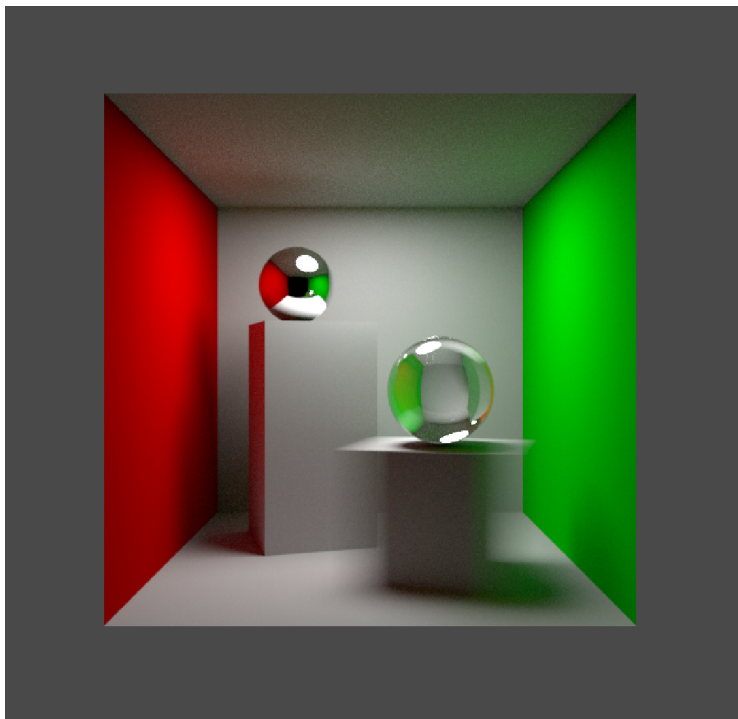

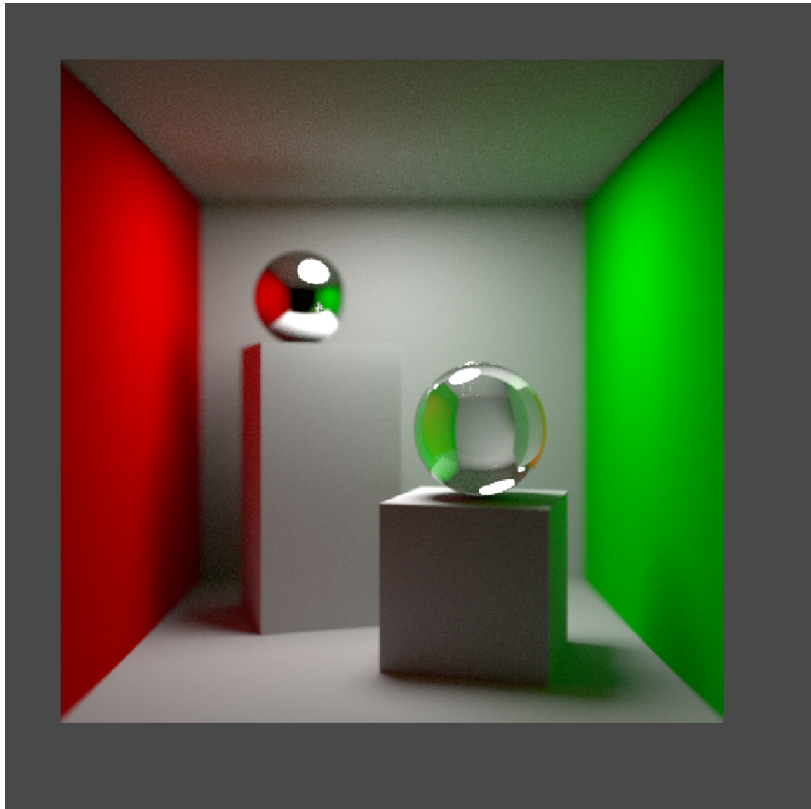

2.

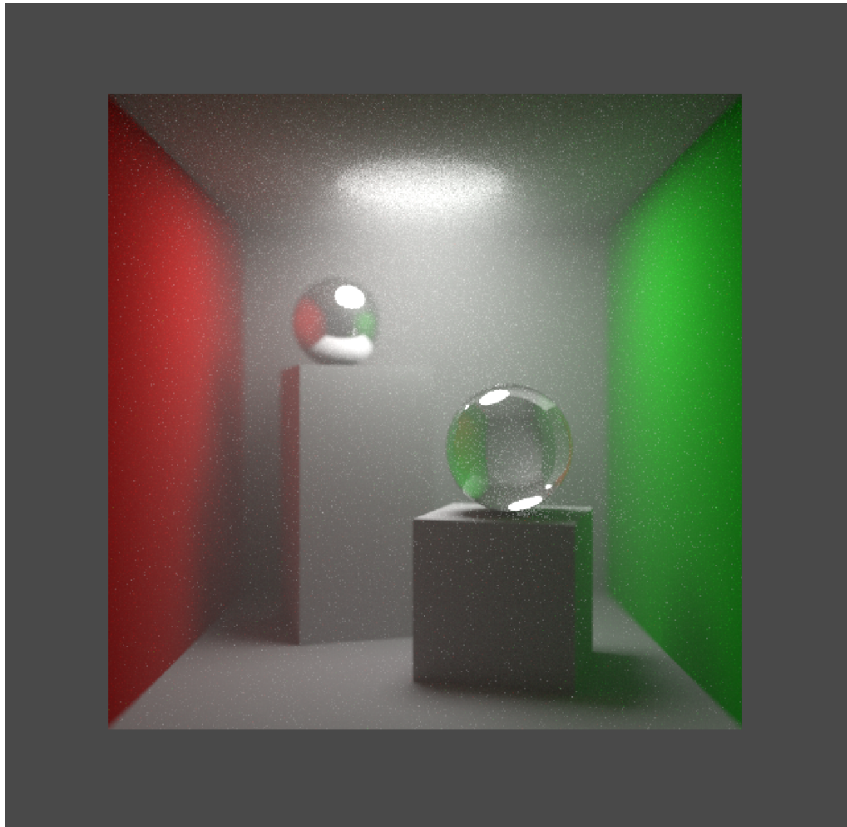

What it looks like is that the image is showing all 3 frames for the small box; since there is motion blur the image appears fuzzy since its in between frames of movement

3.

Everything behind the first glass sphere is blurry; it's making the glass sphere and small cube very clear while making everything behind it blurry since it's out of focus.

4.

What it looks like is some sort of translucent screen over the the image; it appears to bee much more glassy, and the images are less clear
